

• CLIENT-SIDE SECURITY • BROWSER RUNTIME PROTECTION

Detect and block script-based attacks in the user's browser.

- Browser-layer protection
- SOC 2 Type II
- Auditor validated
- AI-enhanced

RISK SURFACE

Website scripts leak data and break compliance.

Modern websites load scripts from dozens of third-party vendors. Each runs with full privileges in the browser. Any one of them can be compromised to skim card data and exfiltrate PII. This vector is invisible to WAFs and server-side controls that don't see how code executes in the user browser.

CSIDE SOLUTION

Complete visibility and protection.

cside monitors every 1st, 3rd, and 4th party script in real time with 100% session visibility. An AI-powered engine analyzes script behavior to detect web skimming and other script-injection attacks before damage occurs, maintaining PCI DSS 6.4.3 and 11.6.1 compliance automatically.

- 
PCI DSS compliance
 Full coverage of requirements 6.4.3 & 11.6.1. Automated inventory, written justifications, and tamper alerts on payment pages.
- 
Magecart & web skimming
 Behavioral detection catches card skimming, including attacks hidden inside trusted first- and third-party scripts.
- 
Privacy compliance
 Identify misconfigured or malicious third-party scripts that exfiltrate data and violate frameworks like GDPR or CCPA.

• BROWSER RUNTIME LAYER

Stop script-based attacks at the browser runtime layer.

Your WAF protects the server. cside protects your customers' browsers. Sophisticated script-based attacks now execute on the browser runtime of visitors without touching servers or backend infrastructure. Deploying cside adds a visibility layer edge-only tools cannot provide, it hooks in before any other script, monitors 100% of sessions, and blocks malicious behavior at the source.

How it works

• PROVEN IN PRODUCTION

Multi-layered application security, delivered with **cside**.

• Case study · PCI DSS compliance in under one day

ONLINE RETAILER

CHALLENGE

Payment pages relied on dozens of unmonitored third-party scripts. The security team needed a full script inventory and tamper alerts without rebuilding their stack.

SOLUTION

cside deployed as a single script tag in under a day. The PCI Shield dashboard instantly surfaced a full script inventory with AI-generated written justifications.

RESULTS

Full compliance achieved on first QSA submission. Weekly PDF reports generated automatically, days of manual effort saved with AI-written justifications.

WHAT CUSTOMERS SAY · VERIFIED REVIEWS · SOURCEFORGE & G2

“The detection capabilities we got with cside were unlike anything we saw in other products we tested in the past. We would definitely recommend the product for PCI and more.

Mark D.
G2 verified review

“Straightforward to implement. Cleanly covers PCI DSS 6.4.3 and 11.6.1.

Frédéric B.
Director of Software Engineering

“CSide has been a game-changer for understanding what's actually happening on our website.
